

The following is feedback from participants who attended the Cairns Seagrass-Watch training workshop, March 9-10 2009.

(no text has been edited by Seagrass-Watch HQ)

I found the Seagrass-Watch training to be....

- ..excellent
- ..very interesting and worth while
- ..very interesting. I learnt a lot about seagrass.
- ..intensive and interesting.
- ..very interesting and I like to thank Len and Rudi very much. I learnt a lot. Thank you

What I enjoyed most about the training was....

- ..coming out to Yule Point and learning all about seagrass and digging for seeds
- ..the field work
- ..in class and out in the field
- ..learning the different species and where to find them. The theory work in class
- ..knowledge of the instructor

It could have been better if....

- ..over a period of time and less big words.
- ..the course work was over a longer time frame
- ..I could learn more about seagrass
- ..we went to Cooktown

I did not realize that

- ..there are that many different seagrass around and I learnt a lot. Thank you
- ..seagrasses are angiosperms.
- ..Seagrass-Watch is all around the world
- ..seagrass have tiny black seeds and most are found in the tropics
- ..the value of seagrass to the ecosystem

Now I understand that....

- ..seagrass monitoring is very important
- .. seagrass is important for dugong and turtle and shelter for fish
- ..seagrasses flower and seed
- ..all about seagrass and again I like to thank Len and Rudi..

In my area the types of seagrasses and habitats include

..Hu and Ea

..halophila, Halodule and enhalus

..Hu, Halodule uninervis, Syringodium isoetifolium

When I go back to my area, I will

..tell everybody about seagrass and sea about mapoon

..set up a monitoring site

..be looking at monitoring

Thank you
