

**The following is feedback from students who attended the QSA Level 2 workshop in the Torres Strait region (QLD), held at the TAFE College, Aplin Road, Thursday Island, 6 - 11 March 2010.**

*(no text has been edited by Seagrass-Watch HQ)*

***I found the Seagrass-Watch training to be.....***

Help us remember everything for last year

helpful

interesting

interesting. It was ok, but seemed very long. Maybe because I was really tired.  
Confusing at times

***What I enjoyed most about the training was.....***

Food, being with other people learning a few new things

Hands on activities. Food

The food!! Ha Ha. Learning new skills and refreshing my seagrass mind

***It could have been better if.....***

If we had more time. If the data notification thing was not so hard

More GPS work

Data entry checking exercise was very confusing. Needs to be reviewed

The tasks weren't so hard

***I did not realise that.....***

Going through datasheets and checking them could be hard

There was so much more to Seagrass-Watch

It would have been this hard

***Now I understand that.....***

Seagrass monitoring can be difficult at times

You need to be very specific and accurate when entering data

Seagrass-Watch is harder than it looks and we should be more careful about our data entry

There is a lot more to Seagrass-Watch
